The Intelligent Dynamic Internet Gateway **iDiG2.0**

Turning Best Effort Networks Into Great Networks

iDiG2.0 – at last a secure, managed, connectivity solution for small and medium sites!

The MountainBox has been created and developed using global standards-based components to deliver on local African requirements by a team passionate about empowering African businesses to use the speeds and cost effectiveness of Broadband for serious business.

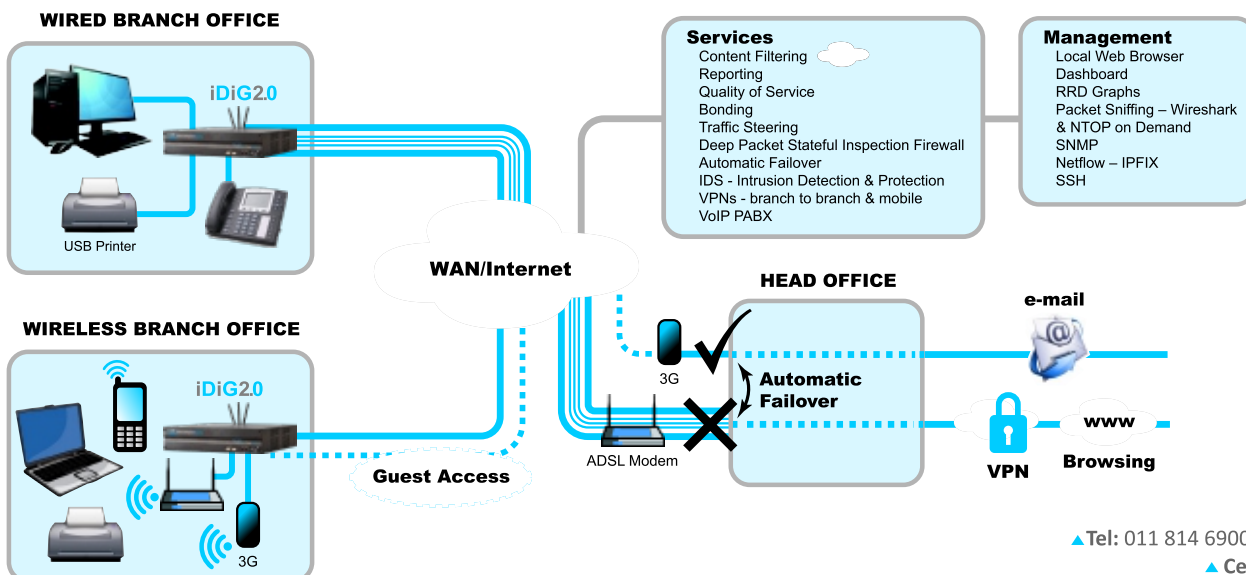

We have listened carefully to the requirements of the African stakeholders and are excited that our service delivers powerfully on these at a highly cost effective price, using WAN Virtualization technologies.

MountainBox Services:

- Powerful firewall – Powerful Stateful, Deep Packet Inspection, Next Generation, Policy Enforced Firewall
- Fully integrated IDS/IPS
- Internet Security – Intrusion Detection, Prevention and Protection including:
 - Malware Protection and Mitigation
 - Botnets Detection & Mitigation
 - Phishing & Fraud Protection
- Virtual Private Networking – Branch to Branch & Mobile supports OpenVPN, IPSec, PPTP & L2TP
- Internet Content Control - Blocking of sites such as violence etc. by Category and Blacklist
- Bandwidth Management – QoS, VoIP Optimisation
